

INTENDED USE

Flexible EPDM edge protection strip with AISI 316L stainless steel core. Halogen free. The purpose is to protect cables from sharp edges.

Fits material thickness from 1.5mm to 2.5mm
(Can be used also for 3mm, but extra care needs to be taken in fitting around tight corners)

INSTRUCTION FOR USE

Cutting.

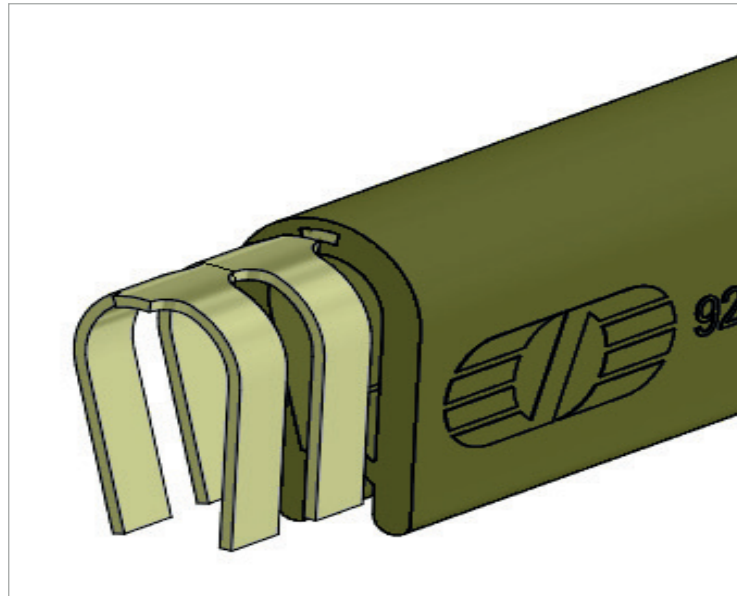

The strip contains individual SS strip pieces. The cut should be made in the middle of the thin top section to prevent the side pieces being exposed. If the side pieces do become exposed, use pliers to pull the end piece of metal out from the rubber.

Fitting.

Press the edge protector over the edges to be covered. Push into corners without overstretching the edge protector.

Gentle heat will improve formability when installing in cold weather.

NOTE: Excessive force or hammering will damage the EPDM covering.

Individual SS legs are encapsulated in EPDM rubber

Flexible in concave and convex orientations

If metal is exposed, remove the outer section with pliers
