

## INTENDED USE

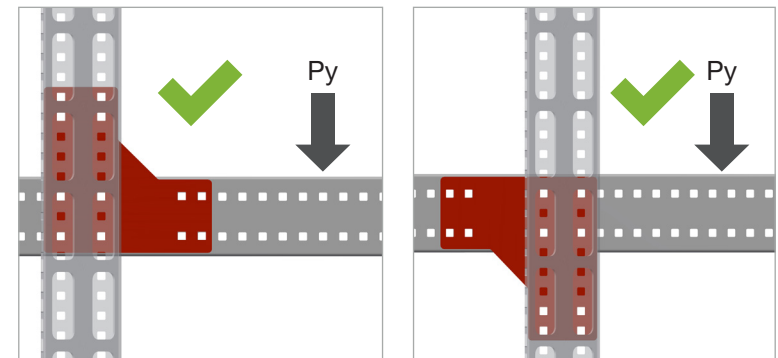

Gusset plate in 5 mm thick material for Mekano® CH125-2T providing extra support for heavier loads and supporting junctions. Highly recommended for L-supports.

## INSTRUCTION FOR USE

Check the direction of the support required as shown below. Fit the Gusset Plate between the sections requiring extra support. Fix together using M12 self locking bolts. The large hole on the back of the channel allows the bolts to be easily fitted.

**Recommended**  
Recommended fitting for support of force  $P_y$  as shown. The tolerance is set so the bolts are in immediate contact with the channel.

**Not recommended**  
Whilst the gusset plate in this direction will fit, the tolerance between the holes and bolts will allow for an initial slip before there is contact between the bolts and holes.
