

INTENDED USE

Bracket for support from rock bolts \varnothing 20 - 25 mm. Support arms are available to suit LOE/TOE cable ladders in widths 300 mm - 600 mm. Can also be used for pipe support. Bolt insulation sleeves in PTFE insulate the lower support arm in SS from the rock bolt bracket in polyester coated HDG to avoid galvanic corrosion.

INSTRUCTION FOR USE

Attach the bracket to the rock bolt using U bolts and tighten securely. Fix the lower support arm to the rock bolt with the PTFE insulation sleeves as shown and tighten securely. The ladder can then be lifted so the bracket passes between two rungs on the ladder, and can then be laid onto the support.

Fix the ladder to the support bracket using either M6 or M10 bolts depending on the ladder type (bolts not supplied).
