

INTENDED USE

All cable ladders are delivered pre-drilled for connecting the standard 3 to 6 metre lengths. If custom cuts are made the smart jig can be used to guarantee the perfect hole placement. The FOE Smart Drilling Jig can be used for all cable ladder heights.

INSTRUCTION FOR USE

1. Cut the ladder to the desired length.
2. Place the smart jig in the correct position, as shown.
3. Drill the holes using the smart jig hole placement guides. Observe common safety procedures, always wear safety glasses, a suitable dust mask and gloves.
4. Always touch-up or seal any cut surfaces or edges of the fibreglass shape before installing, as this will prolong the service life. We recommend sealing all cut ends with a clear acrylic lacquer suitable for outdoor use.
