

INTENDED USE

Mekano® CH100-4 splices are used to connect vertical and horizontal CH100-4 channels securely.

INSTRUCTION FOR USE

Mekano® CH100-4 channels are fixed together using M10 bolts through the channel depth with Oglænd anti-vibration nuts, and connecting to a splice connector.

CH100-4 splices are designed with the Øglænd Nonie™ adjustment system. Which allows for adjustment when fitting in 5 mm increments.

Attach the parts loosely with M10 bolts with Oglænd anti-vibration nuts, adjust and tighten securely.

Nonie™ Principle:

The brackets can be adjusted in increments of 5 mm, so that there are always 4 bolt holes perfectly lined up for fixing.
